Selection Panel

Digital, AI and Innovation Hub

Bureau for Policy and Programme Support (BPPS)

United Nations Development Programme (UNDP)

**Subject: Application for Digital, AI and Innovation Internship – Global Call for 2026
(Job ID: 33001)**

Dear Selection Committee,

I am writing to express my strong interest in the Digital, AI and Innovation (DAI) Internship with the United Nations Development Programme's Bureau for Policy and Programme Support. As a Computer Engineering graduate from Kantipur Engineering College with a strong technical background in full-stack web development, computer vision, and applied machine learning, I am drawn to UNDP's vision of leveraging digital technologies to accelerate progress toward the Sustainable Development Goals. I am particularly interested in contributing to the DAI Hub's work in digital product development and data-driven innovation.

Throughout my engineering studies, I focused on designing practical digital solutions to address complex challenges. For my major capstone project, I designed and developed an AI-based online proctoring system. This involved building user-friendly interfaces using React.js and Tailwind CSS, developing RESTful APIs with Node.js and Express.js, integrating PostgreSQL, and implementing computer vision pipelines using PyTorch, OpenCV, and MediaPipe. Working through the design, implementation, testing, and refinement of this project strengthened my ability to develop secure, user-centered digital solutions while collaborating effectively throughout the software development process.

In addition, I gained practical experience in data analysis and machine learning through a diabetes prediction project using Python, Pandas, NumPy, and Scikit-learn. This project involved data preprocessing, exploratory analysis, feature engineering, model evaluation, and interpreting results to support informed decision-making. These experiences strengthened my analytical thinking and reinforced the importance of transforming data into meaningful insights.

Beyond technical skills, I value continuous learning, collaboration, and adaptability. I enjoy exploring emerging technologies, learning from new challenges, and working constructively with others to achieve shared goals. UNDP's commitment to inclusive digital transformation, responsible innovation, and leaving no one behind strongly resonates with my personal values and professional aspirations.

I would be honored to contribute my technical skills, curiosity, and enthusiasm to the Digital, AI and Innovation Hub while learning from experts working to advance sustainable development worldwide. Thank you for considering my application. I look forward to the opportunity to discuss how I can contribute to UNDP's mission.

Sincerely,

Sanskar Aryal

Computer Engineering Graduate
